P1-12 — L1 Acquisition Follow-up and Evidence-Based Gate Review

Command: P1-12 — L1 Acquisition Follow-up and Evidence-Based Gate Review **Date:** 21 October 2026

1. Repository state (verified before any change)

- Branch arena/ab8e330d-galios-hull; local HEAD = remote ref = ea5a4ea35ca6be45699e90b683e51969c227963e (“P1-11: L1 acquisition handoff package (drafts NOT SENT)”); working tree clean, no untracked files; no reset, no history rewrite.
- Frozen blueprint 02_THEOREM_BLUEPRINT.md SHA-256: ec2fd8d58f8d2a986314f83997d750d689f7c88e98ec8f87753ab4c9cf438cff (identical to the P1-08 after-hash; untouched by this command, along with all proof and validation artifacts).
- Read for this command: P1_11_L1_ACQUISITION_HANDOFF.md (both drafts still marked **NOT SENT**, acquisition-record table still empty) and 04_BLUEPRINT_GAP_REGISTER.md (P1-09/P1-10/P1-11 outcomes).

2. Was a lawful L1 full text or a substantive response supplied? — NO

Checks performed (21 Oct 2026): (i) git status porcelain untracked-files=all — empty: no new or modified file exists anywhere in the repository; (ii) file search across the repo and home workspace for L1-related material (DOI string, author names, title fragments) — no supplied copy found; the only PDFs present are the project’s own deliverables; (iii) text search of all project markdown for any record of sending, receipt, or reply (e.g. “sent on”, “copy received”, “author replied”) — the only match is the still-empty acquisition-record template in P1_11_L1_ACQUISITION_HANDOFF.md §A.

Accurate status: no lawful full text of L1 (Debnath, Prakash & Islam, Cryptogr. Commun. 15(1), 111–127 (2023), DOI 10.1007/s12095-022-00591-6) is available to the project; no acquisition response is documented; there is no evidence in the workspace that either P1-11 draft has been sent (both still carry the **NOT SENT** marking, and sending remains the researcher’s own action). No new access attempt was performed in this command, and none is claimed. No duplicate draft was created.

3. Comparisons: verified vs unresolved

No theorem-level comparison could be performed — the L1 text has never been read by this project — so nothing new is classified as verified or partial overlap. The standings carried forward unchanged from P1_09_OVERLAP_MATRIX.md / P1_10_L1_ACCESS_AND_EXTRACTION.md are:

Question	Status
L1-Q1 — length scope (`p \ | n`?) and hypotheses	**UNRESOLVED**
L1-Q2 — hull-dimension formula vs our T4	**UNRESOLVED**
L1-Q3 — counting: marginal only, or joint (dim C, dim Hull)?	**UNRESOLVED**
L1-Q4 — B_i sets vs our τ-orbits	**UNRESOLVED**
L1-Q5 — any mean/variance results in L1	**UNRESOLVED**
L1-Q6 — finite fields only, or affine/product assembly	**UNRESOLVED**

Previously verified facts are not altered by this command: L1 is closed-access with no repository copy (OpenAlex/Semantic Scholar/Unpaywall records, P1-02…P1-10); at abstract level only, L1 announces a Galois hull-dimension formula and a count by hull dimension (“considering some restrictions on q”, ACM DL rendering). No theorem statement has been inferred from the abstract, here or earlier.

4. Gate G1 decision

Gate G1: DEFER (unchanged). Rationale: the single blocking evidence item — a lawful theorem-bearing copy of L1 — is still absent; with zero new evidence, closing, passing, or failing the gate would be fabrication of progress. The only defensible actions remain: hold the corrected freeze,

keep L1-Q1…Q6 marked UNRESOLVED, make no “first”/priority/novelty claim, and do not start manuscript drafting. The defensible centre (K2+K3+K6) identified in P1-09 is untouched by this command and equally unproven as a novelty claim until L1 is read.

5. Changes made by this command

- Created this status record (+ matching PDF via the existing workflow).
- Appended the P1-12 outcome to 04_BLUEPRINT_GAP_REGISTER.md and ARENA_WORKLOG.md (protocol-required logs only).
- Nothing else: the frozen blueprint, all proof files, validation scripts, the overlap matrix, and both P1-11 drafts are byte-unchanged; no message sent; no person contacted; the paper has not been acquired.
