One-orbit support trapezoid ($a = 6$, $M = 3$, $w = 1$)
attainable (κ, η)
upper: $\min(R, aM - R)$
lower: $\min(R, M, aM - R)$
$H = \sum_i \min(e_i, M - e_{i+1})$
$R = \sum_i (M - e_i)$ (unweighted code dimension)
