P1-11 — L1 Acquisition Handoff Package

Command: P1-11 — L1 Acquisition Handoff Package **Date:** 21 October 2026

> ## ⚠ STATUS: NOT SENT — NOT SENT — NOT SENT > Both drafts in this file are **ready-to-send texts only**. As of 21 October 2026: **no e-mail has been sent, no library request has been filed, no person has been contacted, and no reply exists.** Sending either draft is an action that requires the researcher's (Boss's) own explicit authorization and must be done by the researcher through his own accounts/channels. Arena cannot and has not sent anything.

Paper requested (verified identifiers — from P1_10_L1_ACCESS_AND_EXTRACTION.md §2, repo records only): Indibar Debnath, Om Prakash & Habibul Islam, "Galois hulls of constacyclic codes over finite fields", Cryptography and Communications 15(1), 111–127 (2023). DOI: **10.1007/s12095-022-00591-6**. Correction: Cryptogr. Commun. 15, 129–130 (2023), DOI: **10.1007/s12095-022-00602-6**. Publisher page: https://link.springer.com/article/10.1007/s12095-022-00591-6. (Corresponding author: Om Prakash, IIT Patna — per OpenAlex record W4283360609.)

Draft 1 — E-mail to the corresponding author — NOT SENT

∗(Fill the three bracketed fields, then send from your own e-mail account. Keep it to one short message.)∗

To: Prof. Om Prakash, Department of Mathematics, IIT Patna **Subject:** Request for an author copy — "Galois hulls of constacyclic codes over finite fields" (Cryptogr. Commun. 15, 111–127)

> Dear Prof. Prakash, > > I am **[YOUR NAME]**, **[research scholar / M.Sc. student]**, **[YOUR INSTITUTION]**, working under the supervision of Dr. Habibul Islam on Galois hulls of repeated-root constacyclic codes over affine algebras. > > For an accurate literature comparison, we need to study your paper with Prof. Debnath and Dr. Islam: "Galois hulls of constacyclic codes over finite fields", ∗Cryptography and Communications∗ 15(1), 111–127 (2023), DOI 10.1007/s12095-022-00591-6 (correction: DOI 10.1007/s12095-022-00602-6). The paper is closed-access for us, and we could not find an author manuscript in any repository (we checked arXiv, OpenAlex, Semantic Scholar and Unpaywall). > > Would you kindly share an author copy (accepted manuscript, preprint, or offprint — whichever you are able to share) for private research use? We will use it only to read, cite, and position our work correctly, and will not redistribute it. > > Thank you very much for your time and help. > > With regards, > **[YOUR NAME]** > **[DEPARTMENT, INSTITUTION]** · **[YOUR E-MAIL]**

Variant 1B — if routed through Dr. Habibul Islam (co-author and advisor) — NOT SENT

∗(A two-minute version for the researcher to say/send to Sir directly; Sir can then supply the copy himself or forward Draft 1.)∗

> Sir, for our repeated-root Galois hull paper we need to read one closed-access paper carefully before we can finish the literature comparison: Debnath–Prakash–Islam, "Galois hulls of constacyclic codes over finite fields", Cryptogr. Commun. 15(1), 111–127 (2023), DOI 10.1007/s12095-022-00591-6. It is not openly available anywhere we checked. Could you please share an author copy, or forward my request (Draft 1) to Prof. Prakash? We need it only to compare the hull-dimension formula and the counting results with our enumerator before writing the introduction. — **[YOUR NAME]**

Draft 2 — Library / Interlibrary-Loan (ILL) request — NOT SENT

∗(Paste into your institution library's ILL/document-delivery form, or hand to the library desk. Fill bracketed fields.)∗

Field	Entry
Document type	Journal article — copy via ILL/document delivery (within the library's copyright terms)

Authors | Indibar Debnath; Om Prakash; Habibul Islam
Article title | Galois hulls of constacyclic codes over finite fields
Journal | Cryptography and Communications (Springer)
Volume / Issue / Pages | 15 / 1 / 111–127
Year | 2023 (published online 23 June 2022)
DOI | 10.1007/s12095-022-00591-6
ISSN | 1936-2447
Related item (if easily available) | Correction notice, same journal 15, 129–130 (2023), DOI 10.1007/s12095-022-00602-6
Requester | **[YOUR NAME / LIBRARY ID]**
Purpose | Research — literature review for an ongoing manuscript project
Needed by | **[DATE, if any]**

Checklist — when a lawful copy is received (record, then extract)

A. Acquisition record (fill one row per copy received; keep this file updated):

 # | Date received | Source (author e-mail / Sir / ILL / institutional subscription) | Version (publisher PDF / accepted manuscript / preprint / ILL scan) | Basis (author-supplied / library licence) | File location (keep publisher PDFs out of the public git history)

1 | | | | |
2 | | | | |

B. Theorem-level extraction (answer from the text, with page/theorem numbers; quote vs paraphrase marked):

- [ ] **L1-Q1** — Length scope: gcd(n,p) = 1 only, p | n included, or split? Exact hypotheses on q, n, λ, Galois index (“restrictions on q”)?
- [ ] **L1-Q2** — Hull-dimension formula: exact statement; same edge form as our T4 finite-field case? Pairing convention (code-first/candidate-first) and its effect on dual exponents?
- [ ] **L1-Q3** — Counting theorem: marginal (hull dimension only) or joint (dim C, dim Hull)? Labeled codes or dimension values?
- [ ] **L1-Q4** — The B_i sets (cf. the correction) in context: relation to our τ-orbits and predecessor indexing?
- [ ] **L1-Q5** — Any mean/variance (moment) results?
- [ ] **L1-Q6** — Finite fields only, or any product/affine assembly?
- [ ] Update P1_09_OVERLAP_MATRIX.md (L1 cells “?” → verified verdicts), then Gate G1 re-vote.

Until every box is ticked from the text: no novelty claim, no manuscript drafting.

Still unresolved today (21 Oct 2026): all of L1-Q1…Q6. The paper has **not** been acquired; no request has been sent; Gate G1 remains **DEFERRED**; the frozen mathematical core (blueprint SHA-256 ec2fd8d58f8d2a986314f83997d750d689f7c88e98ec8f87753ab4c9cf438cff, commit 405fce1 at handoff preparation) is untouched by this package.
